

1 Amendment "B" - After Final Office Action

2 Amendments to the Specification:

3 Please replace the Abstract at page 16, lines 3-11 with the following  
4 paragraph:

5 --The present teachings provide for the automated completion of electronic  
6 forms. In typical use, one or more fields are automatically identified within such a  
7 form and information corresponding to those fields is supplied from a predefined  
8 database without user intervention. Also, a user can select the range and/or nature  
9 of the information to be automatically supplied. Various user profiles can be  
10 predefined and selected for automated use, such as profiles by user identity, by  
11 situational context, etc. Aspects of the method and apparatus can operate in  
12 cooperation with a web browser and can make use of source code or HTML content  
13 within a web page, or optical character recognition (OCR), in order to identify fields  
14 to be automatically completed. Furthermore, provision is made for querying a user  
15 to complete fields that cannot be automatically identified. Such user-queried  
16 information can be stored in the database for later automatic use.--
